

Automatic control engineering

Purpose and brief introduction

Zhaosheng Environmental Protection has attached great importance to automatic engineering since its establishment in 1995. It has been developing and supporting automatic control systems for equipment and small sewage and wastewater treatment projects very early. After so many years of practice and through self-cultivation of talents, we have developed a strong automatic control team, which is not only able to handle automatic control projects of various equipment, but also is competent in sewage plants, water plants, and various small sewage and wastewater plants. Handle automatic control engineering. The company's automatic control systems mainly represent Schneider, Siemens, General Motors, Mitsubishi, ABB, Omron and other high-end brands, and its instruments and meters mainly represent international brands such as E+H and Hach.

Years of accumulation, high-quality brands, and perfect after-sales service quality will surely create high-end quality.
